# Agenda

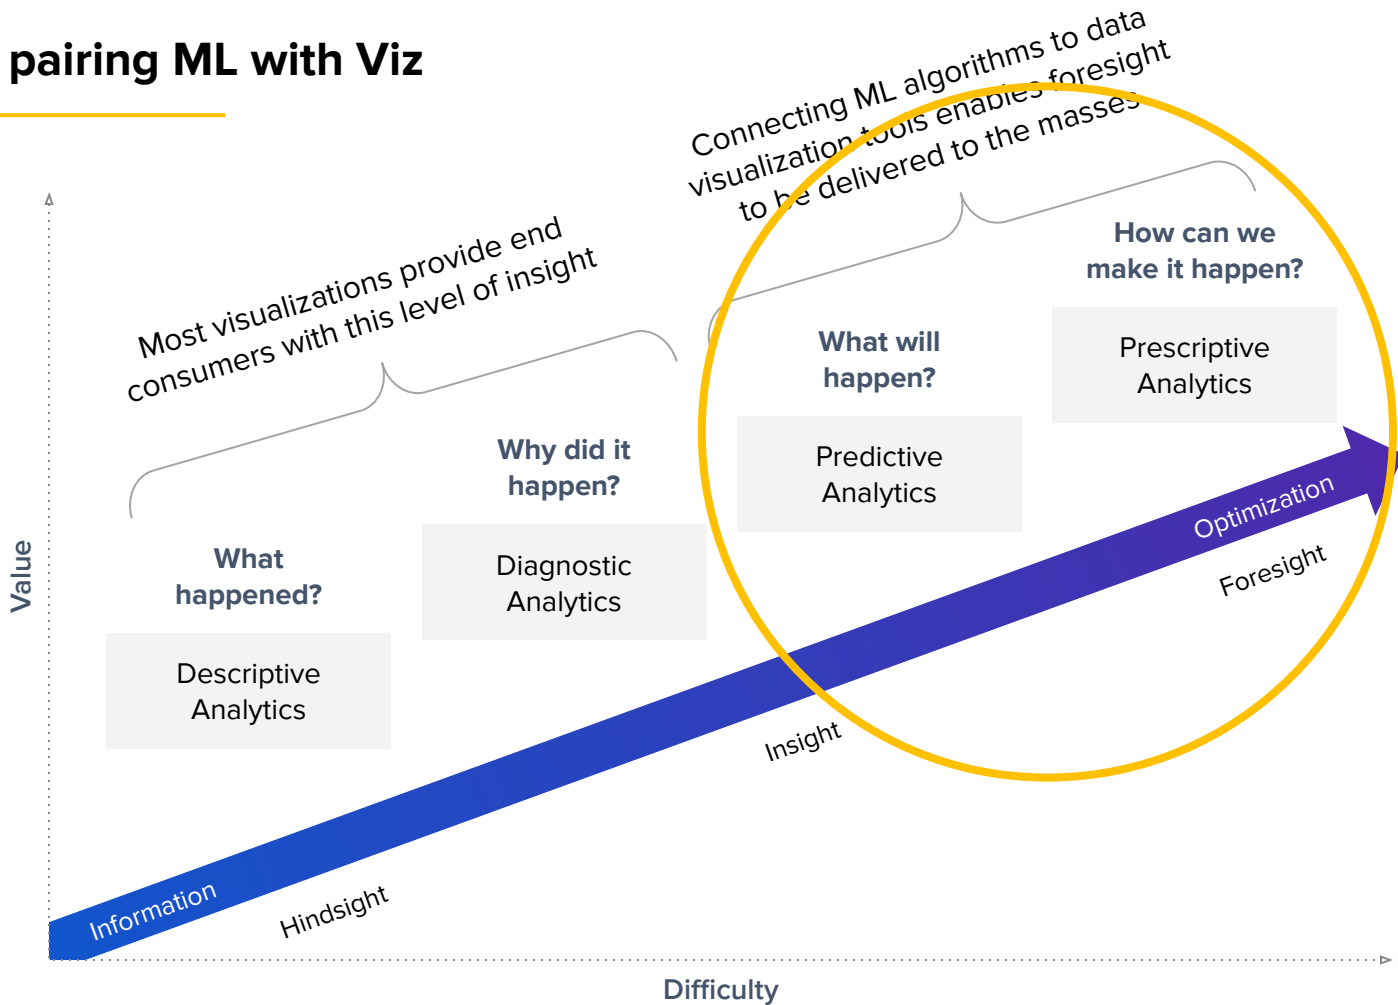

- 01** Value of pairing ML with Viz / 5 mins
- 02** Overview of ML Technologies, Frameworks, Libraries, Model Development Process / 5 mins
- 03** Viz Tools: Capabilities, Comparisons, and Components / 5 mins
- 04** Introduce Use-Case / 15 mins
- 05** Demo Use-Case - Microsoft Power BI / 15 mins
- 06** Demo Use-Case - Tableau / 15 mins

## Dining Experience Use-Case

# Value of pairing ML with Viz

# Value of pairing ML with Viz

## Problem

---

Insights are hard to come by and they are even harder to disseminate to the right folks

Data Scientists and ML Engineers are great at creating models that can deliver foresight, but people don't know how to use them

## Solution

---

Viz tools like Tableau and Microsoft Power BI are pervasive within the enterprise and could serve as a solution for disseminating ML generated insights to the right people.

Additionally, these tools have made it easy for DS / ML engineers to pair the capability of open source ML libraries to viz dashboards, making it easy for people to use their models

# Build a model **in R and in Python**

Use the Model in Tableau and  
PowerBI through 2 demos

# ML Technologies, Frameworks, & Libraries

## Languages

## Frameworks

## Delivery

## Platforms

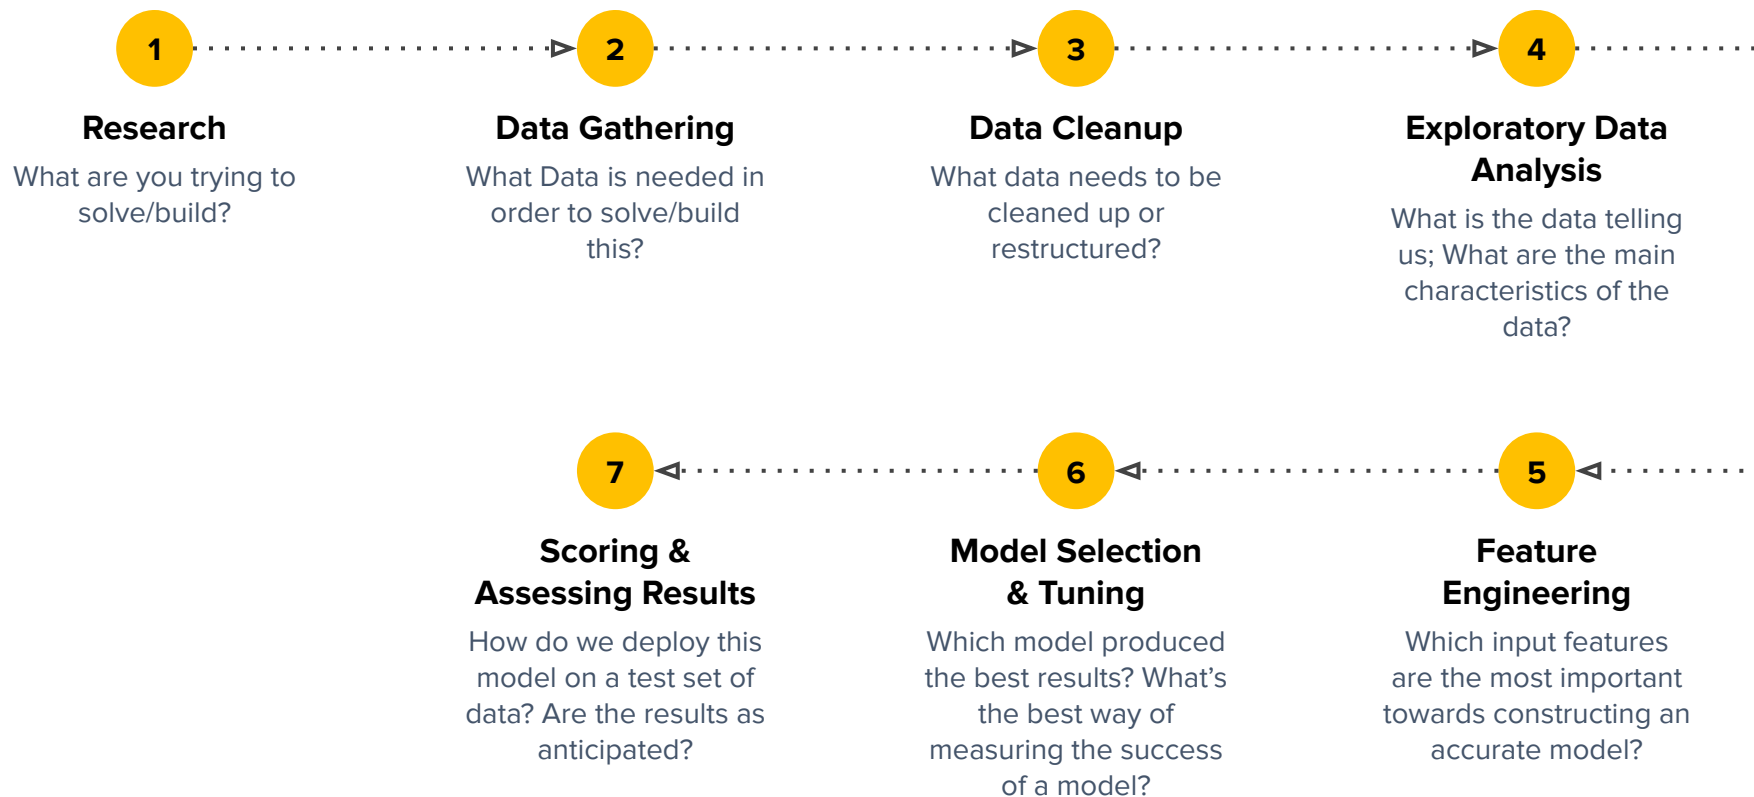

# Building a Model

# ML Technologies, Frameworks, & Libraries

---

# Using a Model in a Visualization Tool

# Visualization tools that will be used in our demo

For the analytical artist, data is your paint, the visualization studio is your palette

Tableau	Shared	Microsoft Power BI
Founded in 2003	Integrate well with third party data sources	Founded in 2013
Strong Data Exploration Capabilities	Excellent Product Support Communities	Strong Focus on Predictive Analytics and Reporting
~\$35/month Professional License	Connect to scripting Languages	~\$10/month Professional License
Available on Windows and Mac OS	Both run on Windows	Available only on Windows
	Present Exceptional Illustration of patterns, cost savings opportunities, ***	

**Truly understand**  
the “experience”

# Dining Experience Use-Case

How to enable the right people within the restaurant to optimize Staffing, Inventory and Menu based on Predictive insights:

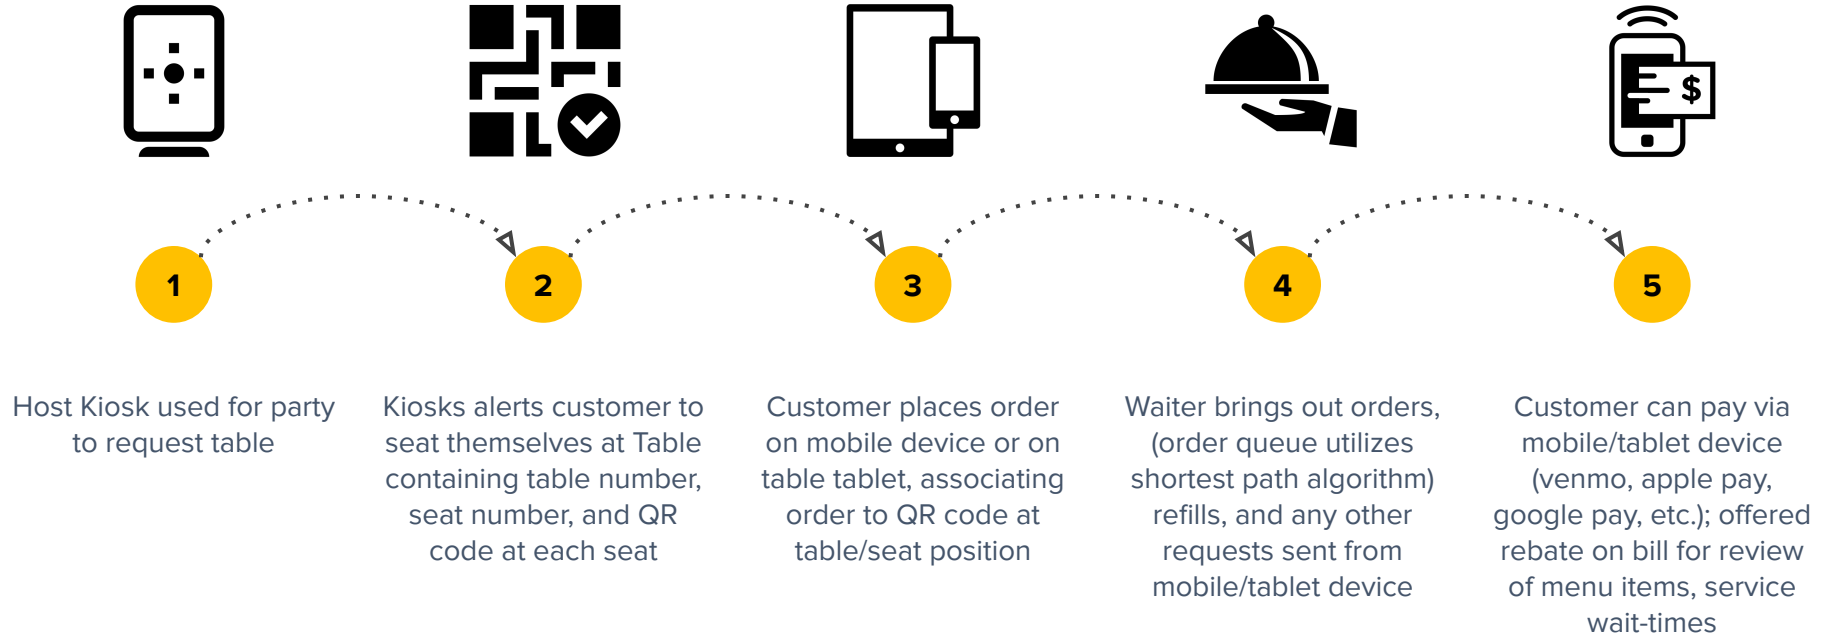

- Nearly autonomous and fully digitalized data collection process
- Collect relevant experience data at different points in the process
- Compile collected data into visual insights, and use it to forecast future process states
- Incentivize customers to leave reviews on menu items/dining experience

# Dining Experience Use-Case / ML Implementation/Desired Visualization App

## Dining Experience Use-Case / Process Workflow [For Experience Dashboards]

# Dining Experience Use-Case / Data Collected

	1	2	3	4	5
	Party Arrival	Party Seated	Party Orders	Party Receives Orders / Additional Requests	Party Submits Payment and Exits Facility
Data Collected (from customer)	<ul style="list-style-type: none"><li>→ Table Party Size</li><li>→ *Contact Number</li><li>→ *Email address</li></ul>	<ul style="list-style-type: none"><li>→ Party Seated Date / Time</li><li>→ Customer Name</li></ul>	<ul style="list-style-type: none"><li>→ Menu Items Selected</li><li>→ Modifications and Customization to Items Selected</li><li>→ Order Submission Date/Time</li></ul>	<ul style="list-style-type: none"><li>→ Order Delivered Date/Time</li><li>→ Refills</li><li>→ Additional Order Requests</li></ul>	<ul style="list-style-type: none"><li>→ Review (1:5 ranking) of one or more menu items (optional/gamified)</li><li>→ Age</li><li>→ Payment Amount</li><li>→ Payment Type</li></ul>
Data Generated	<ul style="list-style-type: none"><li>→ Est. Wait time</li><li>→ Party Arrival Date/Time</li></ul>	<ul style="list-style-type: none"><li>→ Actual Wait time</li><li>→ Party Arrival to Party Seated Duration</li><li>→ Table Number</li></ul>	<ul style="list-style-type: none"><li>→ Dining Start to Order Submitted Duration</li></ul>	<ul style="list-style-type: none"><li>→ Order Submission to Delivery Wait Duration</li></ul>	<ul style="list-style-type: none"><li>→ Final Order Delivered to Payment Received Duration</li></ul>

**Let's dive into a demo**

# Run R Script in Power BI Desktop

Walk through connection process

Go through ML models in RStudio

Demonstration of connecting ML algorithm in R script to visualization dashboards in Power BI

# Python to Tableau via PyTab

Walk through running PyTab Server instance from command terminal

Show how to connect python script to visualization dashboards in Tableau
